Others Apal Formule Vee

Reference	26.039
Bodytype	Others
Status	2nd hand
1st registration	09/1966
Mileage	1 km
Fuel	Gasoline
Color	Blue

Info

Racing doesn't have to be expensive to be incredibly enjoyable. This Belgian-built APAL Formula Vee is the perfect example. A lightweight, simple and pure racing car that focuses on everything that makes driving so rewarding: steering, shifting, braking and, above all, enjoying every corner.

Formula Vee was originally developed as an affordable entry-level racing category, using mechanical components derived from the Volkswagen Beetle. The result is an exceptionally lightweight single-seater offering a remarkably direct driving experience and relatively low running costs.

This particular example is powered by a 1300 cc Volkswagen engine, which was rebuilt and tuned by Leo De Ryck, a well-known specialist in Formula Vee engines. A valuable detail for enthusiasts familiar with the history and engineering of these racing cars.

Another interesting feature is the specially developed exhaust system, manufactured by Ducati specialist Startwin. This modification allows the car to be used on circuits with noise restrictions, subject of course to the applicable decibel limits.

An APAL Formula Vee delivers a driving experience that is increasingly difficult to find in modern sports cars. You sit close to the ground, feel every movement of the car and certainly don't need enormous speeds to experience the excitement of racing.

A fantastic little historic racing car for anyone looking for an affordable introduction to circuit driving, participation in historic motorsport events or simply the pleasure of pure, mechanical driving.

Lightweight, straightforward engineering and, above all, enormous fun!
